

The Balancing Company, Inc.

INDUSTRIAL BALANCING

The Balancing Company, dedicated to solving vibration problems since 1968.

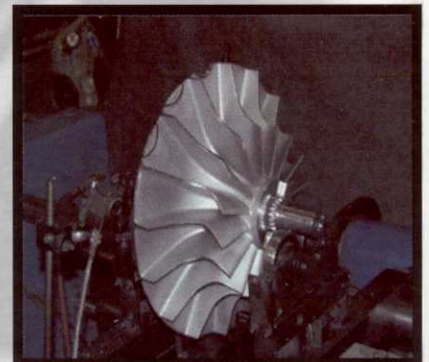

A 56,000 square foot facility, conveniently located near the intersection of two major interstate highways and the Dayton International airport.

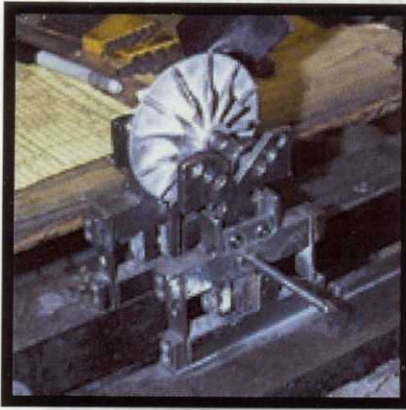

A complete staff of engineers, vibration technicians and a quality assurance department to solve any balancing problem either in our shop or in the field.

Over fifty balancing machines in use to accommodate a complete range of parts from a gram to 50,000 pounds, 12 feet in diameter and up to sixty feet in length.

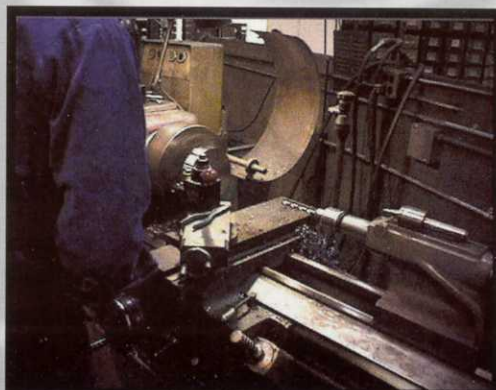

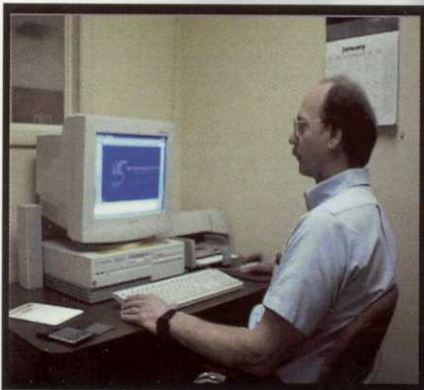

Single Piece Balancing For one-of-a-kind engineering prototypes, special order parts, repaired and replacement parts, quality control masters.

Production Run Balancing When you do not want to invest in expensive equipment, your work center is overloaded, your machine is down, or you have problem parts.

Tooling design, manufacture, cataloging and storage facilities.
